

Fuji Clean testimonial from Marc Telford at "Aim Drain Clearing"
17th August 2011

Here at "Aim drain" we are a small plumbing company based in the hinterland of the Gold Coast. We are also members of the Master Plumbers of Queensland.

Though being general plumbers and drainers we specialise in wastewater treatment plants and drainage works.

We have been involved over the years with all manner of treatment plants and their various companies.

For the last two years we have been selling and installing the "Fuji Clean" treatment plants both here on the Gold Coast and in surrounding shires.

We have found the "Fuji Clean" units' ease of installation as one of its many good points. Being made of fiber glass and weighing in at 450 kg we can easily transport it on a trailer or the back of a Ute. A four ton excavator or small backhoe can then lift the unit off and place it where required.

We have also found the servicing of the units to be simplistic and safe. The design of the units has been well thought out and it is relatively easy to train someone to service them.

Internally they are just as simplistic in their operation; it is a gravity fed system so no pumping large amounts of effluent from one chamber to another or having to change UV bulbs and the like. The effluent pump can be replaced in a matter of minutes and any irrigation or plumbing retailer will have a pump to suit.

We are confident of a long relationship with "Fuji Clean" as their product is of a high standard and the company and staff are competent and professional.

Marc Telford
